It's 1:00 am...
do you know
where your car is?

Know where your vehicle is at any time and monitor driver activity with the Street Smart GPS Tracking System (GP-401). Ideal for parents of new drivers, this advanced system is easy to install and use to ensure that your rules regarding driving privileges are being observed. Unlike factory-installed or police-based GPS systems, the Street Smart GPS Tracking System is designed to remotely track and control your vehicle from any Internet browser or digital cell phone. Keeping your vehicle safe is important – but keeping your family safe is even more so. Street Smart GPS Tracking System allows you to do both, easily and effectively.

The Street Smart GPS Tracking System consists of a miniature location module that incorporates the cell/GPS antenna, and a wiring harness. The module is installed in a concealed area of the vehicle – typically under the passenger or rear seat, or within the seat back. It also can be mounted just below the non-metallic dash pad (such as above the glove compartment). After installation, simply log on to our customer website to register and test the unit. You'll then be ready to use all of the features your system includes.

Features	Street Smart	Factory	Police
GPS Based	YES	YES	NO
Nationwide Communication	YES	NO	NO
Driver Can Locate Vehicle	YES	NO	NO
Triggered Alarm Alert	YES	NO	NO
Low Battery Alert	YES	NO	NO
Unlock Doors	YES	YES	NO
Lock & Remote Start	YES	NO	NO

Easy Install with Feature Connection Options

Accessing the system's nationwide cellular network through a cell phone or any Internet-enabled device anywhere in the world allows you to do the following:

- Locate your vehicle at any time
- Start automated "real-time" tracking at any time
- Monitor each time the engine is turned on and off
- Set a maximum speed limit – if exceeded, you will receive immediate notice by cell phone or computer with the vehicle speed, location and time of day the limit was exceeded
- Program a geographical area in which vehicle is permitted to travel – you will receive immediate notice if it goes beyond the approved area
- Program a "curfew" time at which the vehicle must be returned home or another selected location – you will receive immediate notice if it is used beyond the approved time

Other cell phone/Internet-enabled monitoring features include:

- Automatic alert if unit battery is disconnected or starts losing power
- Ability to establish personalized Points-of-Interest – system will notify you when your vehicle arrives at and/or leaves any of these locations (for example: schools and after-school venues, as well as "off-limits" locations)
- Notification if vehicle is towed away
- Automatic notification when scheduled vehicle maintenance mileage is reached
- Live-Track automation of driven routes

Add these optional cell phone/Internet-enabled vehicle security features:

- Remote door locking/unlocking
- Remote engine start (GPS enables this feature at greater distances than typical remote start systems)
- Remote vehicle self-identification allows you to find your vehicle in any parking lot – signal its horn/lights from your cell phone or Internet-enabled device
- Starter disabler prevents unauthorized use
- Immediate notification via cell phone or computer when your vehicle's factory- or aftermarket-installed security system is triggered
